NATURAL DIAMONDS

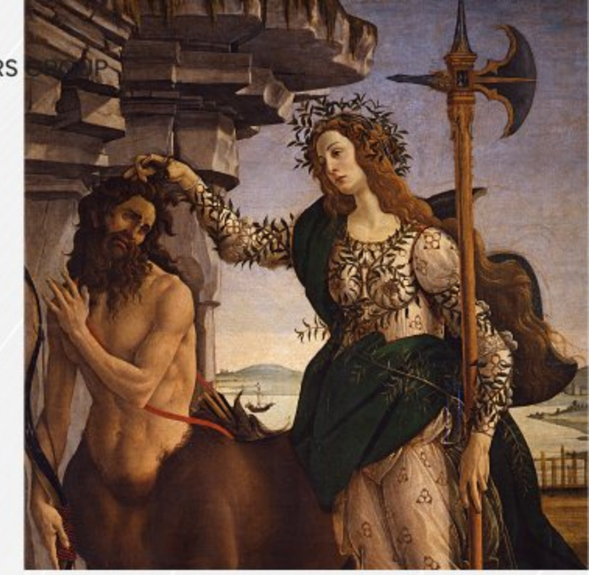

Natural diamonds have long been one of nature's most revered creations.

Since the dawn of humanity their beauty, strength and resilience have **enchanted** people the world over.

Ancient Greeks believed them to have mystical protective powers, and it is from the Greek term '**adamas**', meaning invincible, that the word 'diamond' originates.

Over time, the **magic** of diamonds has continued to grow, and they have come to mark our most cherished moments, bonds and commitments.

NATURAL DIAMONDS ARE SOME OF THE RAREST TREASURES ON EARTH, EACH ONE HOLDING AN EXTRAORDINARY TALE OF TIME AND TRANSFORMATION.

They are one of the closest things to eternity we can hold in our hands, a piece of Earth's deep history and silent witnesses to **the passing of time**.

BOTSWANA DIAMONDS

Geologists first discovered
natural diamonds in Botswana in 1967.

Jwaneng diamond mine remains one of the most
valuable diamond mines in the world, whilst
Orapa diamond mine is one of the largest.

MEET YOUR DIAMOND IN ITS ROUGH FORM

Each natural diamond begins as a geological heartbeat shaped by time and elemental fire.

Your diamond's rugged appearance in its rough form is the result of intense heat and pressure.

At depths of over 100 miles below the surface, through heat of up to 2,000 degrees Fahrenheit and pressures of over 45 kbar, over millions and often billions of years, **an incredible miracle happens**.

THE RARITY OF NATURAL DIAMONDS

Born and transported through extreme formation conditions, natural diamonds are extremely rare.

Your diamond's rarity score is

_____

YOUR DIAMOND'S CHARACTER

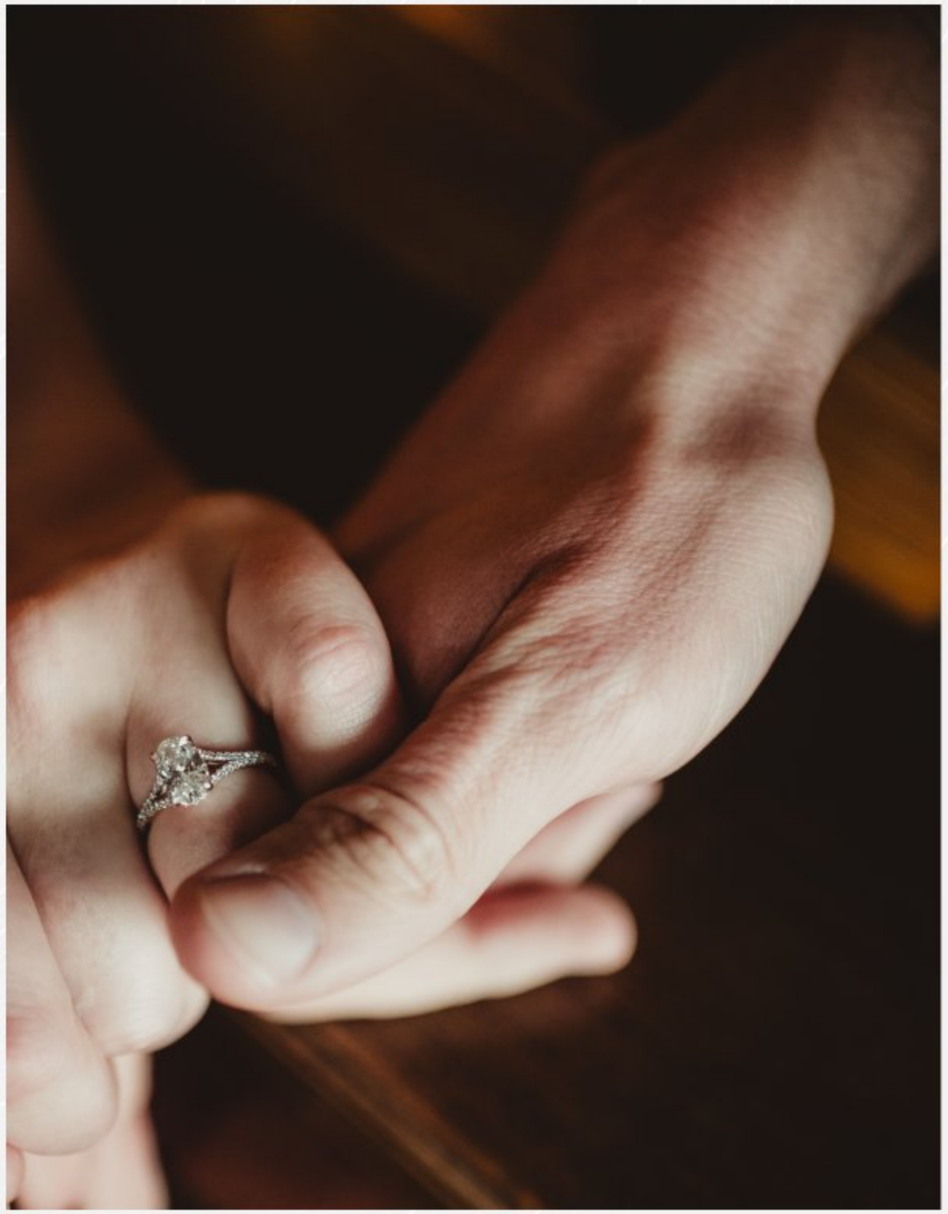

Much like a fingerprint, every diamond
has a natural pattern telling a different story,
each one is unique and no two are alike.

Each diamond has a name, a place, a truth.

Just like you.

ORIGIN BY DE BEERS GROUP

The clarity grade of a diamond indicates an absence or presence of **birthmarks** in a natural diamond.

These are features acquired during its epic formation and journey, such as trapped minerals like amethyst, tiny fractures caused by temperature changes or tiny clouds made of thousands of microscopic diamond crystals.

Birthmarks define your diamond's landscape, and gives it its unique character.

DIAMOND CLARITY

Your diamond's clarity grade is

_____

DIAMOND ARTISTRY

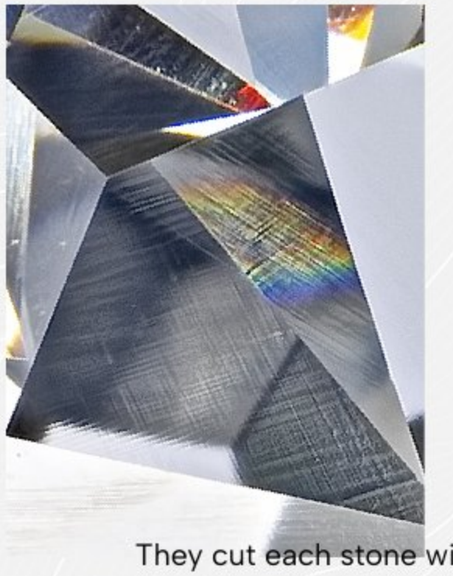

The ancient art of cutting and polishing diamonds is a powerful alchemy of sciences and craftsmanship.

The radiant and fertile lands of Botswana, known for their mythical Kalahari desert and the luxurious Okavango Delta are also known for their exceptionally skilled diamond cutters and polishers

Gifted "diamantaires", many of them women, draw on a profound knowledge of natural diamonds' hidden qualities.

ORIGIN BY DE BEERS GROUP

They cut each stone with mastery to achieve the highest brilliance, polishing the facets to orchestrate the maximum light return.

Two years of careful training, practice and observation prepare them to craft and polish exceptional diamonds.

DIAMOND CUT

Every **ORIGIN De Beers Group** Diamond is crafted with unmatched artistry, to the highest standards of precision

Your diamond has been cut for excellent symmetry.

Folding along vertical and horizontal axes show the degree to which facets mirror each other, reflecting light and delivering exceptional sparkle.

Your diamond's cut grade is

_____

DIAMOND CARAT

Carat is a universal measurement to communicate a diamond's weight, with one carat equal to 0.2 grams.

The word carat derives from the Ancient Greek keration meaning 'little horn', which describes the shape of the seed pod of the Carob or Locust tree.

The carob seeds are all uniform in size and equivalent to a fifth of a gram.

As diamonds were traded along the Silk Road over two thousand years ago, these seeds were originally used to describe the weight of a diamond, further reminding us of our enduring relationship with and appreciation of the gem over time.

Your diamond's cut grade is

_____

DIAMOND COLOR

Diamond color is one of the most fascinating aspects of a diamond’s character.

Natural diamonds are primarily composed of carbon atoms arranged in a crystal lattice, but when trace elements or structural anomalies are introduced during their formation deep within the Earth, they can change the diamond’s color.

Diamonds come in a stunning array of colors, each with its own origin, rarity, and emotional resonance.

BUILDING FOREVER

BUILDING FOREVER

De Beers Group believes natural diamonds represent more than beautiful gemstones, they can help forge a brighter future. They can help fuel nations, empower communities, support livelihoods and champion conservation efforts.

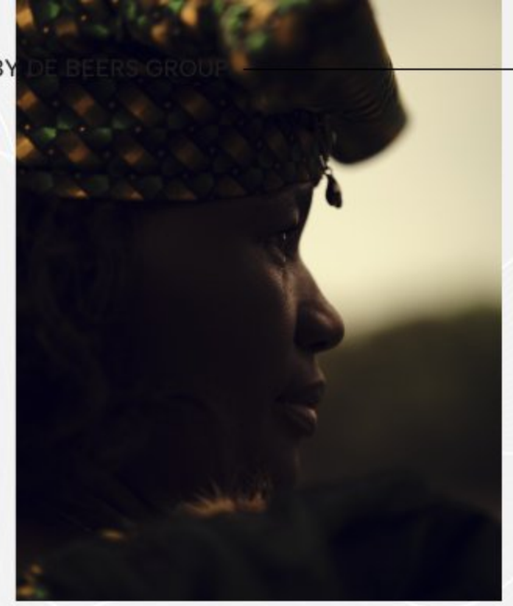

And they last forever, a true treasure to pass down through generations, collecting the stories of all those they have touched along their way.

At De Beers Group, we are involved throughout the journey of natural diamonds. This gives us a unique position and responsibility to help create meaningful impact for the people and places where our diamonds are discovered. An approach that we call Building Forever.

Every **ORIGIN De Beers Group** diamond is helping make a lasting meaningful impact on communities and nature in the country where it was found.

ORIGIN BY DE BEERS GROUP

Today, De Beers celebrate more than 55 years of partnership with the people of Botswana, the nation from which more than 70 per cent of the Group's diamonds originate.

The partnership has developed a hugely successful and sustainable formula for delivering real and lasting socio-economic benefit while meeting the needs of the diamond sector.

When Botswana became an independent nation in 1966, it was one of the least developed countries in the world with just 40 tertiary graduates, limited public services and one of the world's lowest GDPs.

Thanks to the country's careful stewardship of diamond revenues, today Botswana has around 15,000 tertiary graduates annually, offers free public healthcare and free primary and junior secondary education to all, has one of the fastest per capita growth rates annually and is ranked as one of the world's most attractive investment locations.

YOUR DIAMOND'S IMPACT IN BOTSWANA

Every **ORIGIN De Beers Group** diamond is ethically and responsibly sourced.

Your diamond is helping support over 3,000 women in growing their businesses in Botswana. It is also helping to protect 200,000 acres of land for conservation in southern Africa.
