

ARS ELECTRONICA

Linz, September WED 7 – SUN 11

One of the largest stages for media art, an experimental field for the next generation, a showcase for **creativity and innovation** – Ars Electronica is a unique festival for **art, technology and society** worldwide.

"Welcome to Planet B" is this year's theme, and much of it will be understood as an invitation and call to contribute something to **"Plan B"**, with which we can secure a future worth living for ourselves and all those who come after us. Planet B is not **another place to which we can flee**. It is the cipher for another life – on and with this planet. Whatever we do, or don't do, will have **massive consequences and we need to prepare for those consequences**.

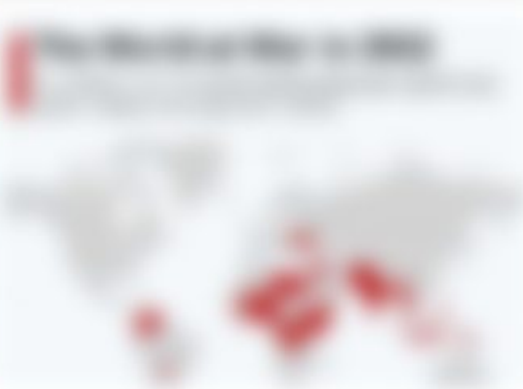

BURNING CHALLENGES

_of facing contemporary society's swift change

4. PRESERVING MEMORIES

_ *Heritage & Mythologies as Living Organism*

Hydrocione Cynocephalus
Marsupial from Australia commonly
known under the name of Tasmanian Tiger,
it was declared extinct in 1936.
It is an example of how a legend is established
between reality, fiction and popular myth.
